

Do you
want to edit
your own
video in
Movavi
Clips? Let's
get started!

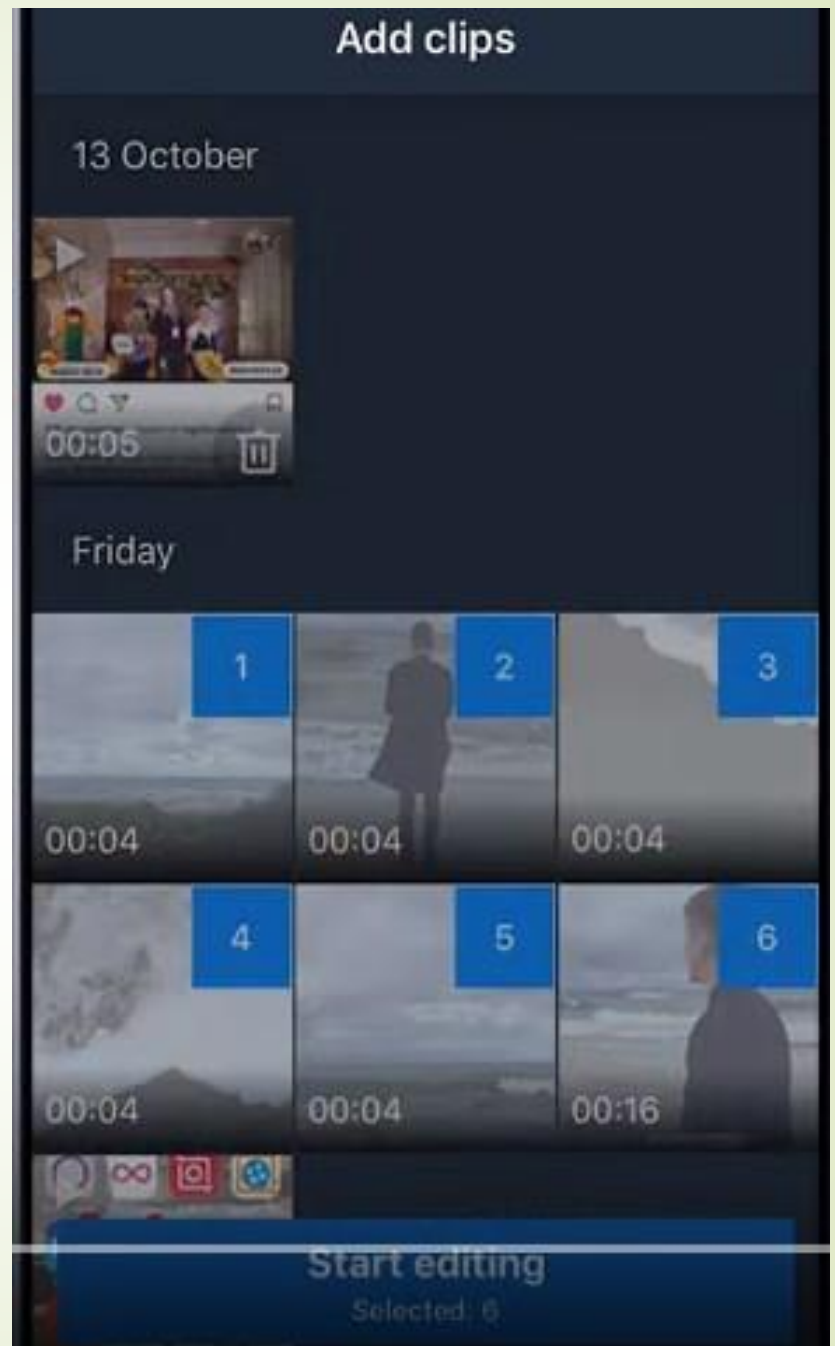

Step 1

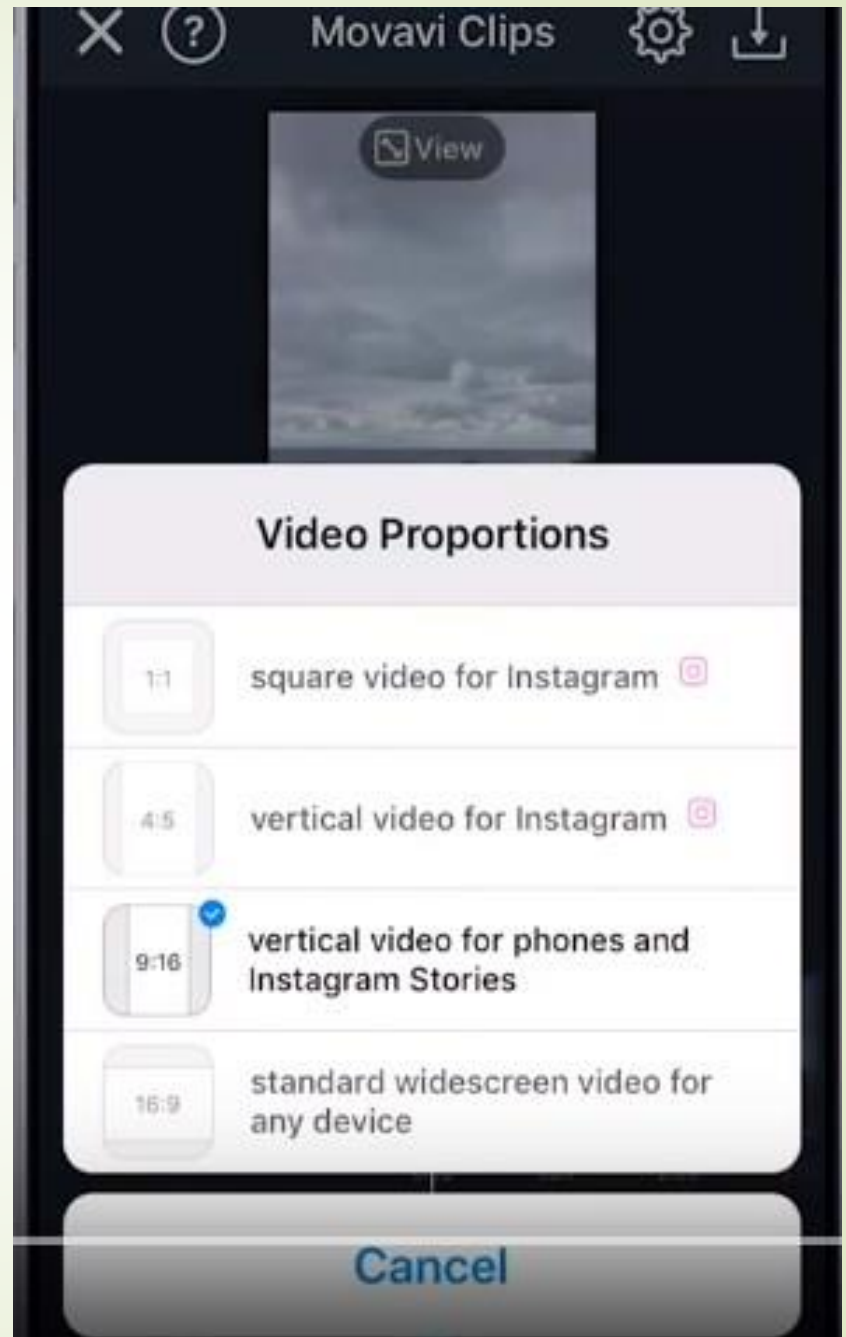

Choose the clips for your movie...

and click
'Start
editing'.

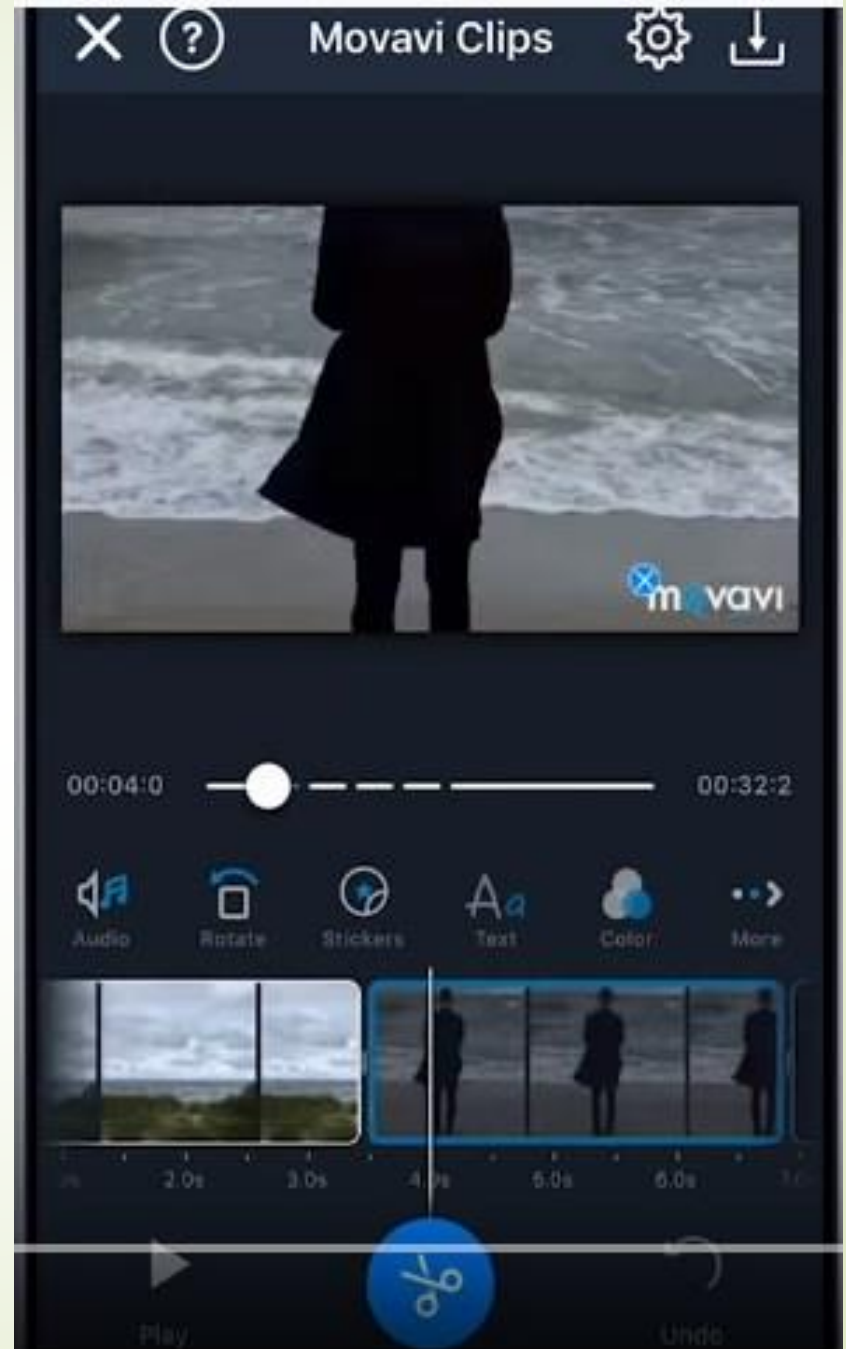

First of all, choose your video format - horizontal, vertical, or square - by clicking the 'View' button.

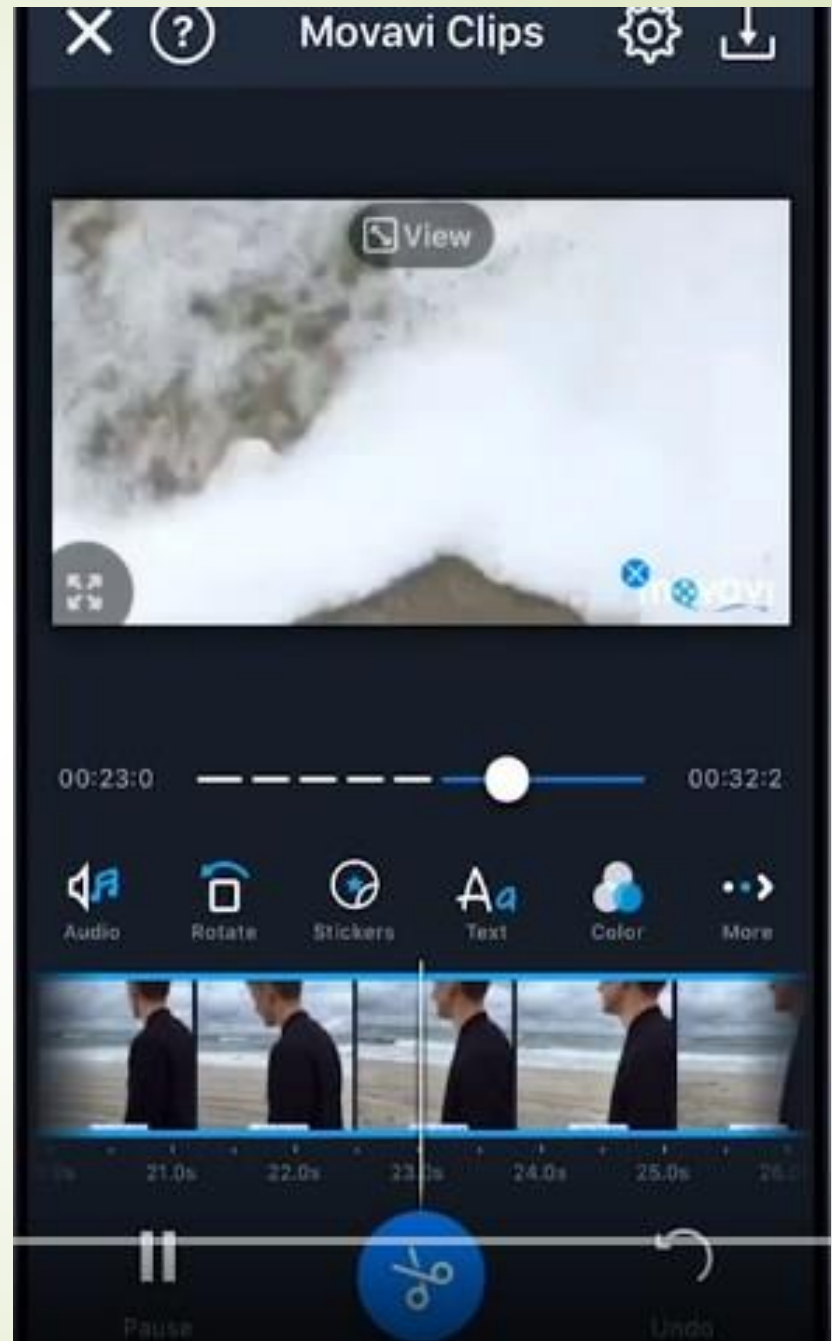

Step 2

Now let's cut out everything we don't want.

Move the video on the timeline so the scissors are where you want to cut the clip.

Click on the scissors icon. To delete that part of the video,

just swipe
up or down.

Step 3

You can zoom in or out on the timeline, too

Step 4

Now place your clips in the order you want them.

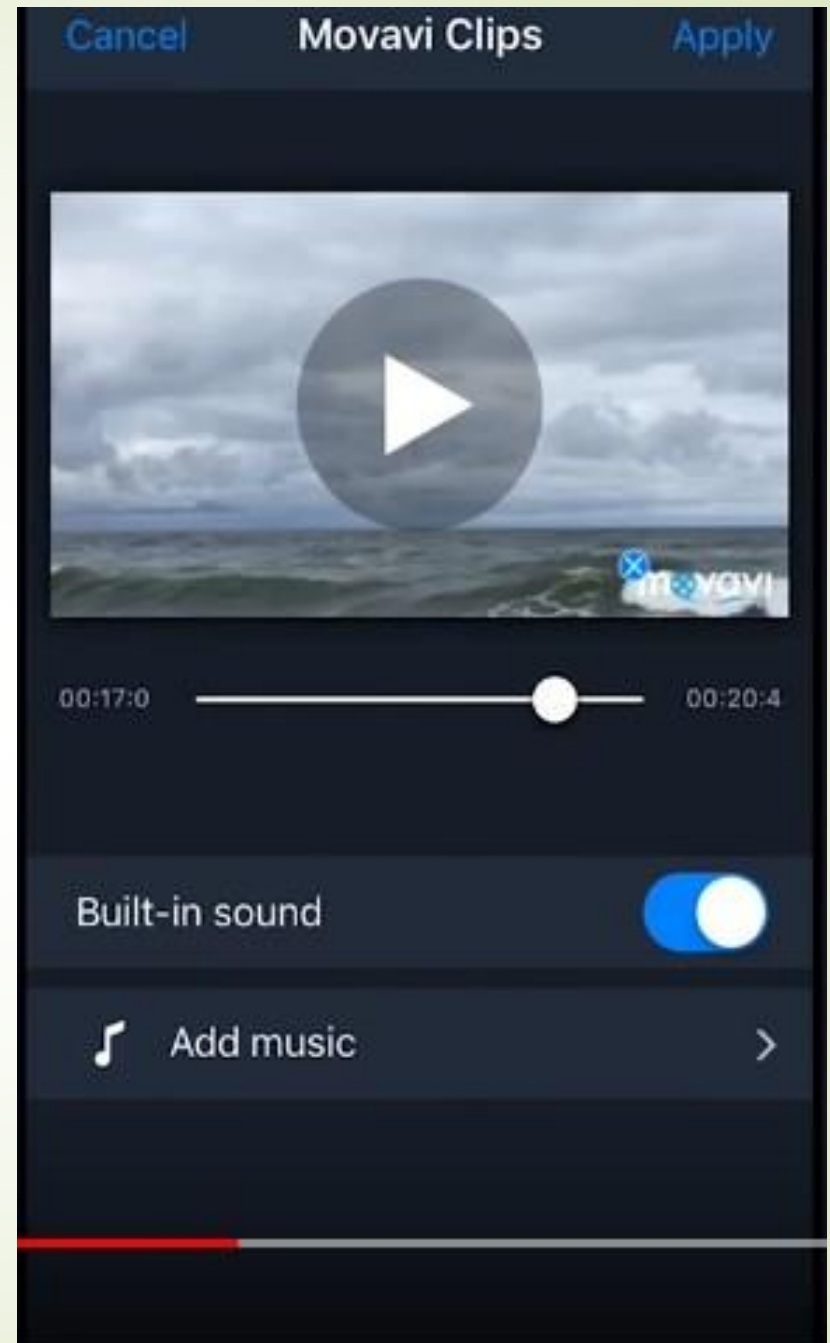

To do this, just hold each clip and drag it to the side.

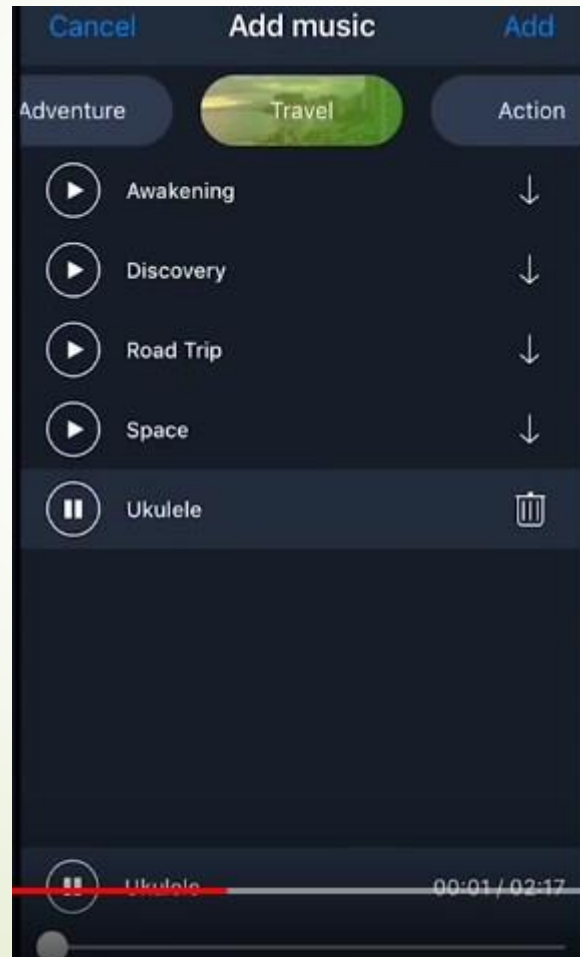

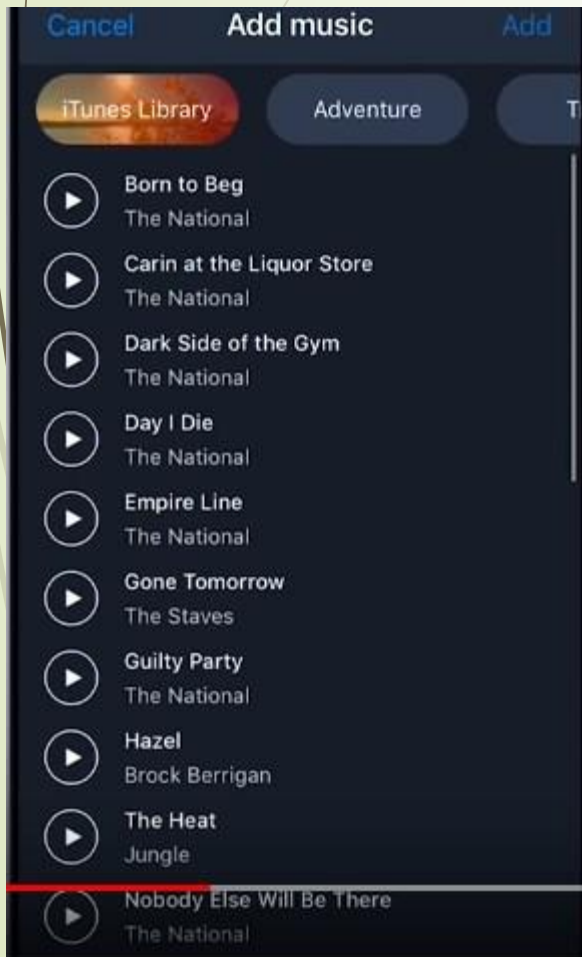

Step 5

The audio button will open a menu that lets you edit the sound. For example, you can turn off the sound altogether, or add background music.

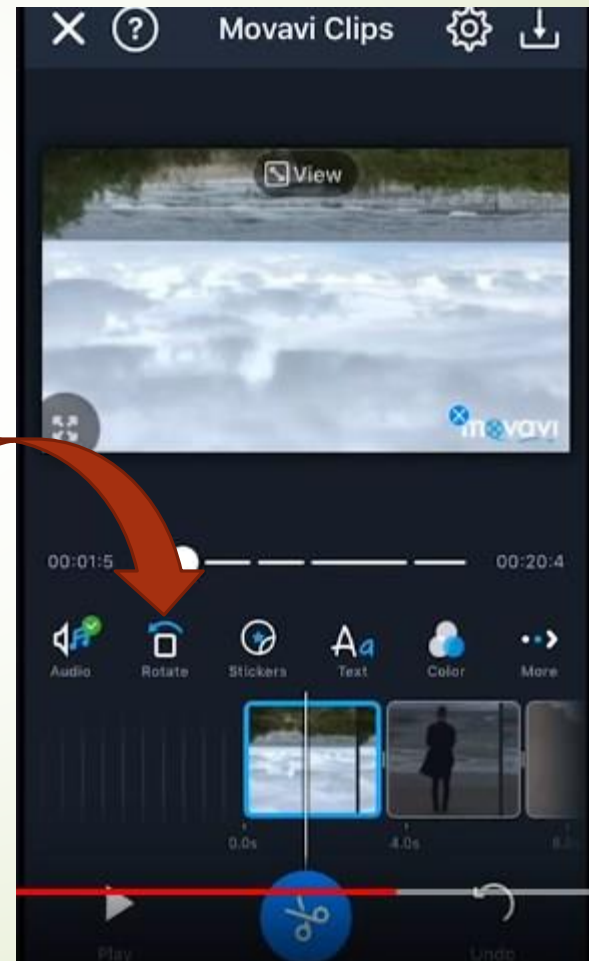

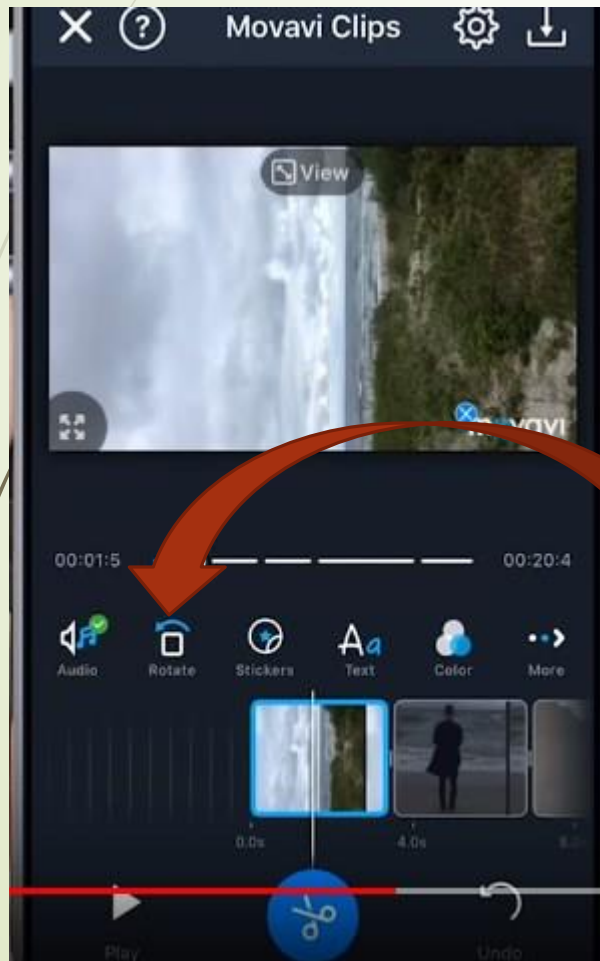

The app includes a built-in audio collection with many different categories to choose from, or you can use your own music.

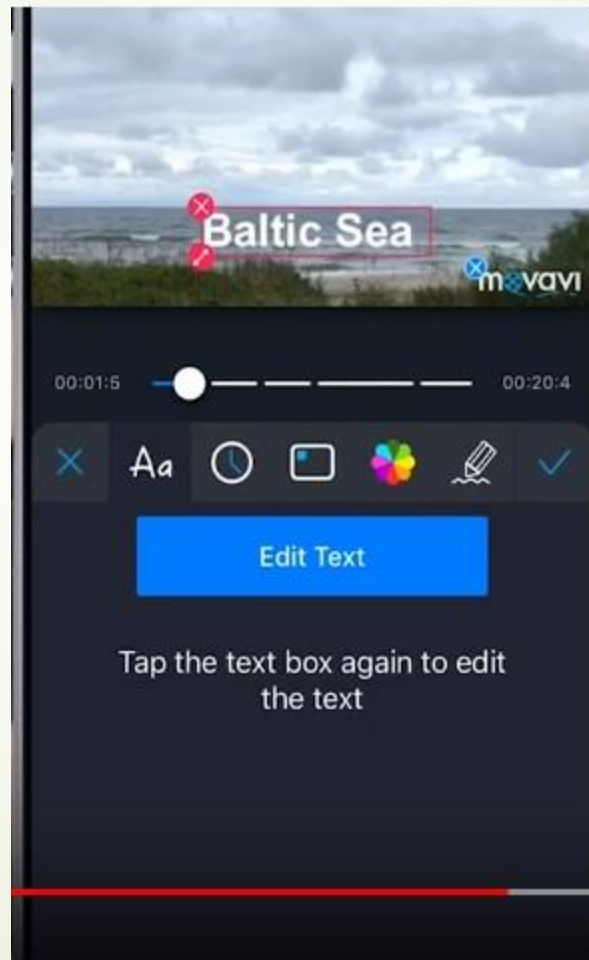

Let's have a look at some of the other Movavi Clips tools.

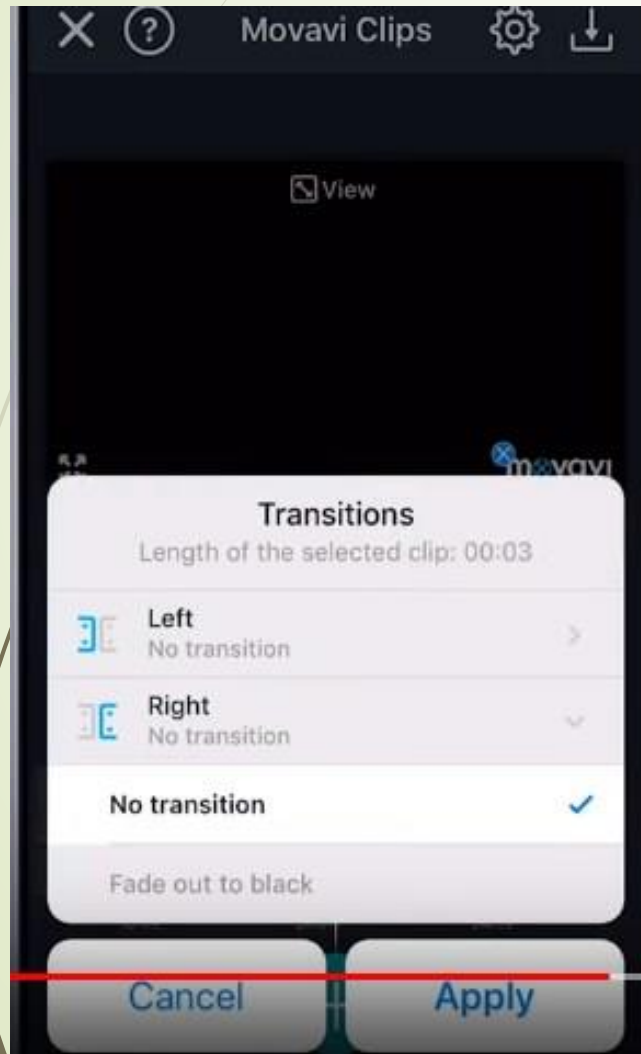

Recover a video that was shot upside down by clicking the rotate button

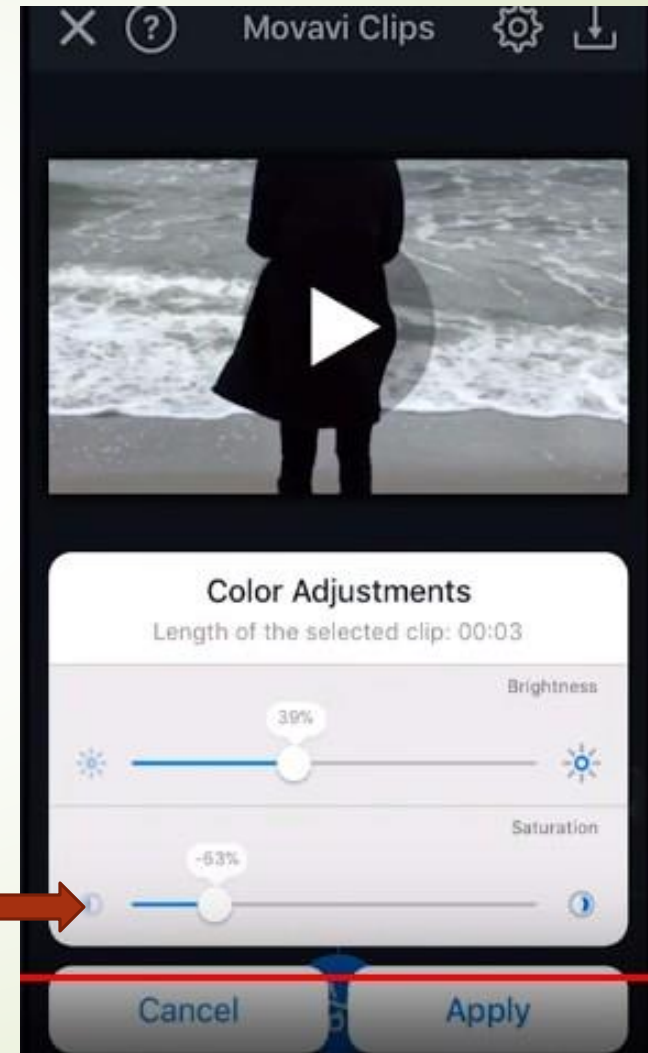

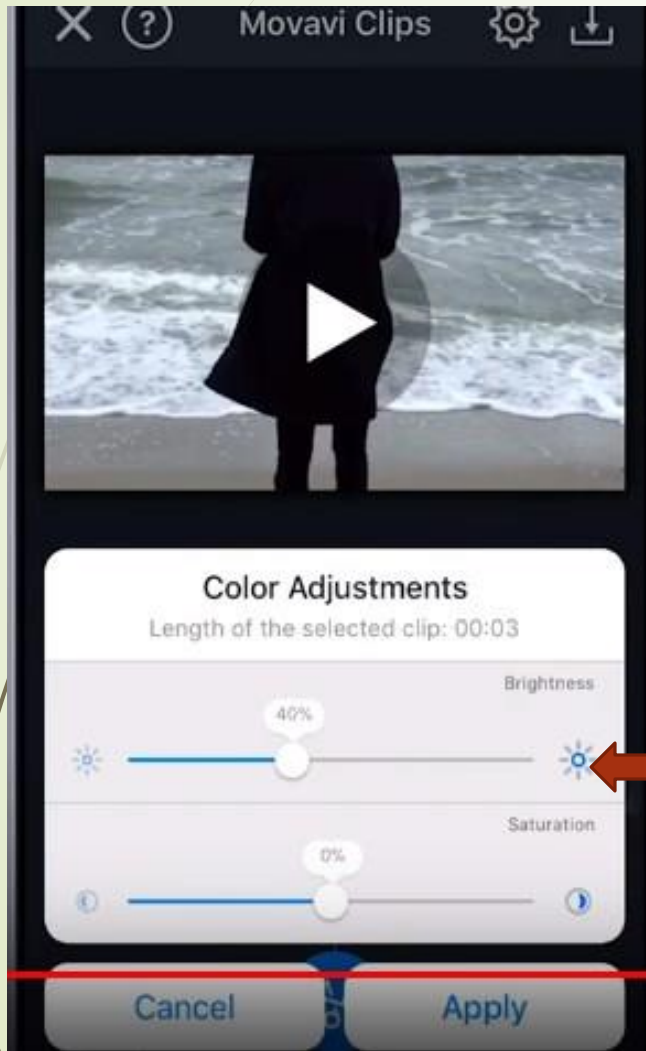

Add stickers, text,

and transitions

Add brightness and saturation with the color option

Click
'Save' ...

when you're happy with the result. All done!
